Product Description
Akoalit PB DKG 300 is a glass fibre reinforced high flow polyolefin homopolymer manufactured from butene-1 monomer. It can be used where outstanding creep, high stiffness, low thermal expansion and property retention at elevated temperature are key requirements.
The grade is typically used for fitting applications such as fitting bodies, support rings, etc. in combination with hot and cold potable water pipe installations. It provides improved surface aesthetic properties combined with excellent tensile and flexural creep performance.
Akoalit PB DKG 300 is available in natural colour in pellet form.
Akoalit PB DKG 300 may not be used in the manufacture of pipe applications intended for sale or shipment to North America, without prior written approval by Seller for each specific product and application.

Regulatory Status
For regulatory compliance information, see Akoalit PB DKG 300 Product Stewardship Bulletin (PSB) and Safety Data Sheet (SDS).

This grade is not intended for medical and pharmaceutical applications.
This grade is supported for use in drinking water applications.

Status
Commercial: Restricted
Availability
Africa-Middle East; Asia-Pacific; Australia and New Zealand; Europe; North America; South & Central America
Application
Automotive Parts; Furniture & Buildings; Industrial; Industrial Packaging; Outdoor and Power Tools; Plumbing, Heating & Cooling; Small Appliances
Market
Automotive; Compounding; Consumer Products; Electrical / Electronics; Industrial Packaging; Industrial, Building & Construction; Rigid Packaging
Processing Method
Injection Molding
Attribute
Good Mold Release; Good Moldability; Good Organoleptic Properties; Good Thermal Stability; High Stiffness; Weldable

**Notes**

These are typical property values not to be construed as specification limits.

**Processing Techniques**

Users should determine the conditions necessary to obtain optimum product properties and suitability of the product for the intended application.

Specific recommendations for resin type and processing conditions can only be made when the end use, required properties and fabrication equipment are known.

**Further Information**

**Health and Safety:**
The resin is manufactured to the highest standards, but special requirements apply to certain applications such as food end-use contact and direct medical use. For specific information on regulatory compliance contact your local representative.

Workers should be protected from the possibility of skin or eye contact with molten polymer. Safety glasses are suggested as a minimal precaution to prevent mechanical or thermal injury to the eyes.

Molten polymer may be degraded if it is exposed to air during any of the processing and off-line operations. The products of degradation may have an unpleasant odor. In higher concentrations they may cause irritation of the mucus membranes. Fabrication areas should be ventilated to carry away fumes or vapours. Legislation on the control of emissions and pollution prevention should be observed.

The resin will burn when supplied with excess heat and oxygen. It should be handled and stored away from contact with direct flames and/or ignition sources. While burning, the resin contributes high heat and may generate a dense black smoke.

Recycled resins may have previously been used as packaging for, or may have otherwise been in contact with, hazardous goods. Converters are responsible for taking all necessary precautions to ensure that recycled resins are safe for continued use.

For further information about safety in handling and processing please refer to the Safety Data Sheet.

**Conveying:**

Conveying equipment should be designed to prevent production and accumulation of fines and dust particles that are contained in polymer resins. These particles can under certain conditions pose an explosion hazard. Conveying systems should be grounded, equipped with adequate filters and regularly inspected for leaks.
Storage:
The resin is packed in 25 kg bags, octabins or bulk containers protecting it from contamination. If it is stored under certain conditions, i.e. if there are large fluctuations in ambient temperature and the atmospheric humidity is high, moisture may condense inside the packaging. Under these circumstances, it is recommended to dry the resin before use. Unfavorable storage conditions may also intensify the resin's slight characteristic odor.

Resin should be protected from direct sunlight, temperatures above 40°C and high atmospheric humidity during storage. Higher storage temperatures may reduce the storage time.

The information submitted is based on our current knowledge and experience. In view of the many factors that may affect processing and application, these data do not relieve processors of the responsibility of carrying out their own tests and experiments; neither do they imply any legally binding assurance of certain properties or of suitability for a specific purpose. This information does not remove the obligation of the customer to inspect the material on arrival and notify us of any faults immediately. It is the responsibility of those to whom we supply our products to ensure that any proprietary rights and existing laws and legislation are observed.
