Technical Data Sheet
Metocene HM562S

Metallocene PP Homopolymer

Product Description
Metocene HM562S is a metallocene-catalyzed homopolymer with a very narrow molecular weight distribution, suitable for fiber extrusion application. It is formulated with an anti-gas fading stabilization package. It can be advantageously processed in different spinning technologies.

Typical applications are spunbond nonwovens and continuous filaments such as partially-oriented yarns (POY). Metocene HM562S expands processing capabilities to achieve unmatched properties balances. It allows faster spinning and lower denier filaments. Additional advantages of Metocene HM562S are low volatiles and low processing smokes.

Regulatory Status
For regulatory compliance information, see Metocene HM562S Product Stewardship Bulletin (PSB) and Safety Data Sheet (SDS).

Status
Commercial: Active

Availability
Africa-Middle East; Asia-Pacific; Australia and New Zealand

Application
Filament Yarn; Furniture & Buildings; Geotextile & Agriculture; Hygiene Nonwoven; Protective Clothes

Market
Textile

Processing Method
Continuous Filament/Spinning; Spunbond

Attribute
Controlled Rheology; Gas-fading Resistant; Homopolymer; Narrow Molecular Weight Distribution
